Since 1925...

The story of the founding of Akgun Group began in 1925.

Today, the group operates in total with 16 factories. 6 of them produce floor and wall ceramic tiles, while the rest manufacture sanitary ware, construction chemicals, bathroom furniture, bricks, and roof tiles. The group provides employment for nearly 3,500 people in total.

“Dura-Tiles BG” AD is a part of the Akgun Group and has been producing porcelain tiles in Novi Pazar, Bulgaria since 2016.

The factory’s capacity is approximately 6 million m^2, of which 85% is exported to a total of 16 countries.

“Dura Tiles BG” AD continues to achieve its goals. It also continues to invest in order to triple its capacity and accelerate its development both in the local market and abroad.

От 1925 г. насам...

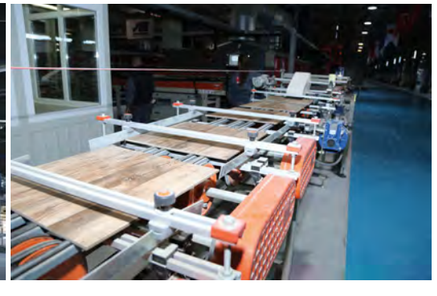

Историята за създаването на Акгюн Груп започва през 1925 година.

Днес, групата разполага с общо 16 завода. От които 6 произвеждат подови и стенни керамични плочки, а останалите са за санитарен фаянс, строителна химия, мебели за баня, тухли и керемиди. Осигурява обща заетост на близо 3500 души.

„Дюра-Тайлс БГ“ АД е част от Акгюн Груп и от 2016 г. насам произвежда гранитогрес в гр.Нови Пазар, България. Капацитетът на завода е приблизително 6 милиона m^2, от които 85% се изнасят в общо 16 държави.

„Дюра Тайлс БГ“ АД продължава да реализира своите цели. Също така продължава да инвестира, за да утрои капацитета си и да ускори развитието си както на местния пазар така и в чужбина.

ТЕХНИЧЕСКА ИНФОРМАЦИЯ

ВИДОВЕ ПЛОЧКИ

Всички керамични плочки, произведени от Дюра-Тайлс БГ АД, отговарят на европейския стандарт EN 14411.

Глазирани стенни плочки и декорации с водопоглъщане E>10% - Група B III, с параметри съгласно EN 14411. Тези плочки са предназначени за облицовка на вътрешни стени при температури над . Плочките не са устойчиви на замръзване.

Глазирани плочки и декорации за под с водопоглъщане E ≤ 0.5% - Грес порцелан (гранитогрес) - Група B Ia, с параметри съгласно EN 14411. Тези плочки са предназначени за вътрешна и външна облицовка в жилищни и обществени сгради. Те се характеризират с ниско водопоглъщане, висока устойчивост на огъване, голяма твърдост и устойчивост на износване.

Всички подови плочки, произведени от Дюра-Тайлс БГ АД, са от типа Грес порцелан (гранитогрес).

КРИТИЧНИ ТЕХНИЧЕСКИ ХАРАКТЕРИСТИКИ НА КЕРАМИЧНИТЕ ПЛОЧКИ

Водопоглъщане и устойчивост на замръзване

Водопоглъщането е най-важното свойство при избора на подходяща плочка за конкретно приложение, особено във влажни среди или в райони, изложени на цикли замръзване/размразяване. Обикновено, колкото по-ниско е водопоглъщането, толкова по-висока е устойчивостта на замръзване, компактността и твърдостта на плочката.

Видове плочки според водопоглъщане	Тип	Стандарт	Приложение
E > 10	Стенни плочки „ФАЯНС“	EN 14411, B II	Само за вътрешни стени
E ≤ 0.5	Напълно витрифицирани плочки „ГРАНИТОГРЕС“	EN 14411, B Ia	Устойчиви на замръзване за външни и вътрешни подове, фасади, балкони, тераси

Устойчивост на износване (PEI)

Устойчивостта на износване на глазираните плочки е един от основните параметри при избора на подходяща плочка. Стандартът EN ISO 10545-7 класифицира устойчивостта на износване в класове от 0 до 5.

Класификация PEI	Препоръчано приложение	Примери
PEI 0	Не се препоръчва за подове	Вертикални облицовки във вътрешни помещения с нисък трафик на хора
PEI 1	Лека натовареност без риск от надраскване	Спални, помещения за меки обувки
PEI 2	Лека натовареност с леко замърсяване	Вътрешности на апартаменти
PEI 3	Средна натовареност с умерено замърсяване	Семейни къщи, хотелски стаи
PEI 4	Висока натовареност с повече замърсяване	Офиси, хотели, магазини, тераси, входове
PEI 5	Изключително висока натовареност и абразия	Ресторанти, магазини, обществени сгради

Устойчивост на приплъзване

За някои области безопасността е критично важна. Отговорността за осигуряване на подходяща повърхност пада върху производителите, архитекти и майсторите на плочки.

Тестовете за устойчивост на приплъзване в ЕС се извършват по различни методи: DIN 51130 (за ходене с обувки) и DIN 51097 (за ходене бос).

Група DIN 51130	Ъгъл на наклон	Степен на триене	Приложение
R9	>6°-10°	Ниска	Входове в къщи, болници
R10	>10°-19°	Нормална	Магазини, малки кухни
R11	>19°-27°	Повишена	Кухни, перални
R12	>27°-35°	Висока	Големи кухни
R13	>35°	Много висока	Месарници

Група DIN 51097	Ъгъл на наклон	Степен на триене	Приложение
A	>12°	Ниска	Съблекални
B	>18°	Нормална	Сауни
C	>24°	Висока	Басейни

TECHNICAL INFORMATION

TYPES OF TILES

All the ceramic tiles produced by Duratiles BG AD comply with the European standard EN 14411.

Glazed wall tiles and glazed wall decorations with water absorption E > 10 % – Group B III, with parameters conforming to EN 14411. These tiles are designed for tiling wall interiors with temperatures above 0 °C, the tiles are not frosting proof.

Glazed tiles and glazed floor decorations with water absorption E ≤ 0.5 % - Gres Porcelain (glazed porcelain) – Group B Ia, with parameters conforming to EN 14411. These tiles are designed for interior and exterior tiling in residential housing and public utility buildings. The tiles are characterized by low water absorption, high resistance to bending, high hardness and resistance to abrasion.

All the floor tiles produced by Duratiles BG AD are of the Gres Porcelain type (glazed porcelain).

CRITICAL TECHNICAL PROPERTIES OF CERAMIC TILES

Water absorption and frost resistance

Water absorption is the most important property for selecting the appropriate tile for a particular application, especially in wet environments or in areas subject to freeze/thaw cycles. Generally, the lower the water absorption, the higher the frost resistance, compactness and hardness of the tile.

Types of tiles as per water absorption	Type	Standard	Application
E > 10	Wall tiles „MONOPOROSA“	EN 14411, B II	Only for interior walls
E ≤ 0.5	Fully vitrified tiles „GRES PORCELLANATO“	EN 14411, B Ia	Highly frost-resistant tiles for exteriors & interiors, facades, balconies, terraces

Abrasion resistance (PEI)

The abrasion resistance of glazed tiles is one of the decision-making parameters for the choice of an appropriate tile. The standard EN ISO 10545-7 classifies abrasion resistance with classes/degrees from 0 to 5.

PEI classification	Applications	Places
PEI 0	Not recommended for floors at all	Interior vertical tiling, non-trafficable areas
PEI 1	Light duty floor with rare traffic without risk of scratching	Bedrooms, soft sole shoes
PEI 2	Light duty floor with rare traffic and small pollution	Interiors of flats
PEI 3	Medium duty floors with moderate pollution	Family houses, hotel rooms etc.
PEI 4	Heavy duty floors with busy traffic and higher pollution	Offices, hotels, shops in shopping malls, entrance areas
PEI 5	Extra heavy-duty floors with high exposition to abrasion	Restaurants, shops, public buildings

Slip resistance

For some areas, the safety consideration is even more critical than for others. There is a responsibility for stakeholders involved in specifying flooring products (manufacturers, architects, distributors, installers etc.) to ensure that the surfaces are fit for the purpose and do not pose a safety risk for the users.

There is no uniform testing method in the EU and there are different requirements defined for anti-slip tile surfaces for areas walked on when wearing shoes (DIN51 130) or when barefoot (DIN 51 097).

Group DIN 51130	Slope angle	Friction grade	Application
R9	>6°-10°	Low	House entrances, hospitals
R10	>10°-19°	Normal	Stores, small kitchens
R11	>19°-27°	Increased	Kitchens, laundries
R12	>27°-35°	High	Large kitchens
R13	>35°	Very High	Butcheries

Group DIN 51097	Slope angle	Friction grade	Application
A	>12°	Low	Dressing rooms
B	>18°	Normal	Saunas
C	>24°	High	Swimming pools
